Question **1**

Correct

Write a program that prints a simple chessboard.

Input format:

The first line contains the number of inputs T.
The lines after that contain a different values for size of the chessboard

Output format:

Print a chessboard of dimensions size * size. Print a Print W for white spaces and B for black spaces.

Input:

2
3
5

Output:

WBW
BWB
WBW
WBWBW
BWBWB
WBWBW
BWBWB
WBWBW

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main()
{
    int n,size,i,j,count;
    scanf("%d",&n);
    while(n--){
    scanf("%d",&size);
    count=0;
    for(i=0;i<size;i++)
    {
        for(j=0;j<size;j++){
```

```
            if(++count%2==1)
              printf("W");
            else
              printf("B");
    }
        if(size%2==0)
            count++;
        printf("\n");

    }
}
    return 0;
}
```

	Input	Expected	Got	
✓	2 3 5	WBW BWB WBW WBWBW BWBWB WBWBW BWBWB WBWBW	WBW BWB WBW WBWBW BWBWB WBWBW BWBWB WBWBW	✓

Passed all tests! ✓

Question **2**

Correct

Let's print a chessboard!

Write a program that takes input:

The first line contains T, the number of test cases

Each test case contains an integer N and also the starting character of the chessboard

Output Format

Print the chessboard as per the given examples

Sample Input / Output

Input:

2
2 W
3 B

Output:

WB
BW
BWB
WBW
BWB

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int main()
{
    int T;
    scanf("%d",&T);
    while(T--){
        int N;
        char start;
        scanf("%d %c",&N,&start);
        char other=(start=='W')?'B':'W';
        for(int i=0;i<N;i++){
            for(int j=0;j<N;j++){
                    if((i+j)%2==0)
```

```
                    printf("%c",start);
                    else
                    printf("%c",other);
                }
                printf("\n");
            }
        }

    return 0;
}
```

	Input	Expected	Got	
✓	2 2 W 3 B	WB BW BWB WBW BWB	WB BW BWB WBW BWB	✓

Passed all tests! ✓

Question **3**

Correct

Problem Statement:

In a small coding competition, participants are to be grouped into teams of three members, each member represented by a number — 1, 2, and 3.
The rule of the competition states that no member can repeat within the same team.

Write a program to display all possible unique team combinations that can be formed using the members 1, 2, and 3 without repetition.

Sample Output:

1 2 3

1 3 2

2 1 3

2 3 1

3 1 2

3 2 1

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int main()
{
    int i,j,k;
    for(i=1;i<=3;i++){
        for(j=1;j<=3;j++){
            for(k=1;k<=3;k++){
                if(i!=j && j!=k && i!=k){
                    printf("%d %d %d\n",i,j,k);
                }
            }
        }
    }
    return 0;
}
```

	Expected	Got	
✓	1 2 3 1 3 2 2 1 3 2 3 1 3 1 2 3 2 1	1 2 3 1 3 2 2 1 3 2 3 1 3 1 2 3 2 1	✓
